## ENHANCED SIP TRUNKS

### Flat-Rate, Unlimited Local and Long Distance Calling

*This Does \*NOT\* Include International Calls (Blocked By Default)*

This means all calls to US and Canada are included. Which also means your monthly bill will have very little fluctuation in price. The only variance will be associated with the specific fees that are drawn on a daily basis – meaning that the FEB (28-day) bill could be a couple of cents (maybe dollars) less than the MAR (31-day) bill.

### Individual DID Overflow for Busy and Un-Answered Calls

*Route Calls To Other Locations, Voice Mail or Auto-Attendants*

If the lines are busy, or go unanswered for a programmable amount of time, you can route calls to an auto-attendant in the “Cloud” and provide options to ring specific other numbers or take messages. You could also send calls directly to a voice mail system and once a message is left, it would then be emailed (with the caller’s message attached as an audio file) to the designated email address for that voice mail box... AND... You can also have different auto-attendants and voice mail boxes for each number, *i.e. Sales -vs- Service Calls.*

### Individual DID Overflow for Fail-Over

*Route Calls To Other Locations When Internet or System Is Down*

This means, that if the phone system goes down or loses Internet, just like with the above option, you can route calls (by number) to an auto-attendant in the “Cloud” to direct calls to cell phones, based on the options they press, and/or and take messages, that would then be emailed (with the audio file) to your designated email address... AND YES!...This Auto Attendant Can Be Different Than The Busy One.

### Cloud-Level DID Call Routing and Forwarding

*Route Calls To Other Locations Manually Or Based On Scheduling*

Should you ever want to redirect one of your phone numbers to another location, we can program the number to automatically reroute to the new destination, whether that’s a Home Phone, a Cell Phone, Another Provider, an Auto Attendant, etc.

*YOU CAN ALSO PROGRAM SPECIFIC NUMBER CALL-ROUTING BASED ON TIME OF DAY... LIKE IF YOU WANT YOUR SERVICE LINE TO RING A SERVICE CELL PHONE ONLY AT NIGHT (FROM 5PM to 8AM); ETC.*

### Inbound and Outbound Call Logs

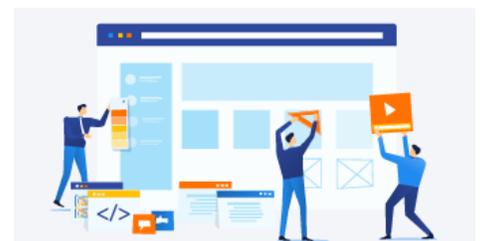

*Basic Details On Inbound And Outbound Calls For Your Review*

At any time, you can review your call logs and see calls by date, time, phone number called (inbound or outbound) and duration of the call. You can also, easily, generate specific reports for any of those options as well. Meaning, if you want to look at Daily Call Volume, you can run reports for calls on just that day(s); if you want to check calls in to a certain number – like a special marketing number – you can run a report for just that specific number, and even filter those results for a specific time-frame; etc.

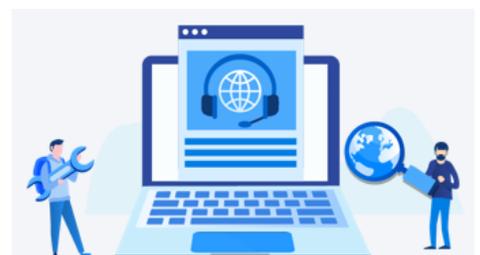

### Simple

Intuitive and efficient  
from back-end  
administration to hosting  
conferences

### Powerful

Packed with features and  
endlessly scalable

### 99.999% Reliability

Global fiber network with  
complete failover  
support
